Agility Guides Our Exit Strategy

We Exit When

1. There is a need to rebalance weights for risk management purposes
2. A company no longer meets our buy/hold criteria
3. A company no longer meets our valuation criteria
4. There is no longer a durable double digit return expectation for a company's stock
5. There is a more compelling investment opportunity to fund

18 years

The average life span of company listed in the S&P 500

The only constant is change. The average lifespan of a company listed on the S&P 500 has fallen from 90 years in 1935 to just 18 years today, highlighting how quickly leadership erodes without sustained competitiveness.

We stay agile and active, continuously reassessing fundamentals, risks, and relevance, never letting our guard down.

Navigating this crisis

The Oil Shock: What It Means For India

- A temporary oil shock is fundamentally different from a structural one. Unlike earlier stress episodes, India is entering this phase with significantly stronger macro shock absorbers.
- Public capex has scaled up meaningfully at both the Centre and state levels, reinforcing domestic growth momentum.
- India has a far greater ability to absorb short term commodity volatility without allowing it to evolve into a broader macro disruption something that differentiates the current phase from past crises.

What if the oil prices remains high for a longer period

- In a stress scenario where oil sustains at USD 100/bbl through FY27, CAD could expand to ~2.3% of GDP which would still be within a manageable CAD range.

Will FII selling continue

- P/E multiples is now approaching multi year support zones, levels that have historically marked important inflection points for India's relative outperformance.

Valuation Linked Return Framework – What History Tells Us

- The message from history is clear: current valuations offer a favourable entry point.

Navigating this crisis

How We Are Navigating This Phase

- Emphasis on resilience based on our 3M (Market Size, Market Share, Margin of Safety) approach.
- Focus on businesses which enjoys market leadership, strong balance sheet and robust cash flows which are better positioned to navigate external shocks.
- Our approach remains anchored in what we describe as QuAgile investing: combining quality with agility.

Sectoral Preferences

- **Zero exposure to Oil marketing companies (OMCs) and aviation are among the most impacted sectors in a rising crude price scenario.**
- Positive on Automobiles and auto ancillaries, Consumption oriented businesses, Banking and financials, Capital goods and Select Hospitals.
